REMOTEVIEW

REAL TIME DRILLING DATA - REMOTE DATA STORAGE - NO ADDITIONAL SOFTWARE

RemoteView offers easy access to your drilling data. RemoteView is platform independent, fast and secure.

With **RemoteView** you can view live screens, see a trendanalysis of the last 24-hours, export module, or plot any historical data you want.

RemoteView is user friendly and comes with a highly customizable user interface.

Setup:

- A RemoteView server will be placed on-site
- Data connection via WITS protocol
- Data connection via serial port
- On site server syncs online with webserver (internet connection required)

On site requirements:

- WITS protocol periodic export (e.g. every second)
- Export via serial port
- A stable internet connection (if not available we can provide this)
- A power connection (220V)
- A small space to place the RemoteView server
- That's it...

RemoteView highlights:

- No direct connection between RemoteView and the rig's operating system
- Highly secured data connections
- No additional software required, RemoteView is browser and platform independent
- Clear license pricing
- Real-time viewing of rig data
- Total project history can be plotted and downloaded for further analysis
